

The easiest way to get your own modeling tool

## Creation of Custom Modeling Workbenches Made Easy

**Open**

Sirius is an Open Source project of the Eclipse Foundation. Created by Thales and Obeo, it provides a generic workbench that can be easily tailored to fit specific needs.

**Visual**

Create and represent information in a visual way. A modeling workbench based on Sirius provides a set of graphical editors: diagrams, tables and trees.

**Easy**

Thanks to a short feedback loop, a workbench can be created in a matter of hours. Shape characteristics and behaviors can be configured with a minimal technical knowledge.

**Declarative**

No code generation is involved. The ability to test the configuration instantly facilitates the quick creation of a users' business domain workbench.
